GENESIScoin Introduction

GENESIScoin (GENc) is the flagship product of S.B.A Digital LAB, operating on Binance Smart Chain as a strictly non-mintable token with a fixed supply of 100B GENc. The design combines transparency, modularity, and long-term sustainability.

Contract Architecture

GENc Token Contract – Core ERC-20 token, verified on BSC

• Fixed supply: 100B GENc

• Modular tax model: Auto-Burn, Liquidity, DevG, TeamG, Marketing, Rewards (BNB)

• Strictly non-mintable, inflation-resistant

• Rewards (BNB): part of transaction taxes redistributed to holders in BNB

PreSaleGENc Contract – Stage-based sale system

• 5 stages, bonuses up to +15%

• Strict wallet and transaction caps

• Unsold tokens automatically redistributed

• Integrated B100D loyalty program with daily payouts and final bonus

PublicSaleGENc Contract – Dynamic sale system with daily bonus logic

• Four phases, scaling minimum buy

• Daily bonus pool with rollover logic

• Integrated with EligibleBot (bonus validation and distribution)

• Provides dedicated functions for Dividend pool funding and payout — the contract executes transfers, while external bots manage holder lists and eligibility logic

Dual Dividend Systems

GENESIScoin maintains two independent dividend mechanisms:

1. **Rewards (BNB):** distributed via the GENc Token contract, funded by transaction taxes. Minimum holding requirement: 10,000,000 GENc. This module is embedded directly in the token's tax logic and operates autonomously.

2. **DividendGENc:** distributed from the dedicated 10% GENc pool through DividendTracker (divT) and DividendVerifier (divV). Minimum holding requirement: 5,000,000 GENc. This is a fully separate mechanism, with progressive combo logic, initialHold tracking, and the +151% update rule.

Both systems are **logically independent** — Rewards (BNB) is governed by the GENc token contract itself, while DividendGENc is managed by external bot modules and pools.

Asset Manager Contract (in testing) – Future module under development

• Will automate treasury and liquidity management

• Includes vesting and timelock logic for reserves

GENESIScoin (GENc) – Core Specification

Total Supply

• 100,000,000,000 GENc

• Fixed supply, strictly non-mintable.
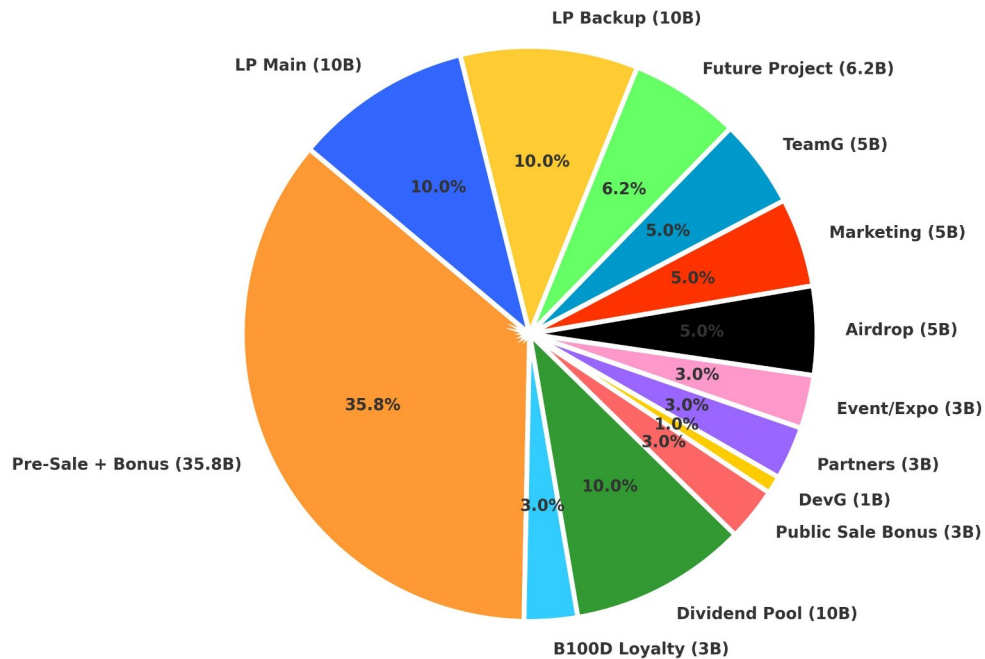

• Contract has no _mint() → no inflation possible.

Allocation

• Pre-Sale + Bonus: 35.8%

• B100D Loyalty Pool: 3%

• Dividend GENc Pool: 10%

• Public Sale Bonus: 3%

Remaining allocations (Initial Distribution)

Allocation	Address	Amount
DevG (1%)	0x4667EB38aBAF064AFA7c750519Ca80aA1cD92cCa	1B GENc
Partners (3%)	0x748D87424ee8551AAD6B7150A22438996a039F91	3B GENc
Event/Expo (3%)	0x9102Cd7F68E07526D8BeeA3B9819fEA0275C7C2E	3B GENc
Airdrop (5%)	0x56aD64Ae67eEd1f84eBBA7348A0850FE9d597aD2	5B GENc
Marketing (5%)	0xD6B0F8bb0F85805df3971EEC9BF4DA5982c8D524	5B GENc
TeamG (5%)	0xa23493758741F118dA4a555B67Aae4A57d2ae54a	5B GENc
Future Project (6.2%)	0x0C2DAe44547F66b95c83dFBa80c8358e46f5C679	6.2B GENc
LP Backup (10%)	0x5807804228dc9AbD8b6FFddA7C5226CBe5AD9d86	10B GENc

GENESIScoin (GENc) – Allocation of 100B Supply

Pre-Sale System

• Supply: 33B GENc

• 5 stages with bonuses up to +15%

• Limits during Pre-Sale (no tax):

  ◦ Max purchase: 500M GENc per tx

  ◦ Max wallet: 1% total supply (1B GENc)

• Unsold tokens redistributed → LP, Burn, Dev, Community, Team, Dividend.

Unsold Token Redistribution	Share
Liquidity Pool (LP)	15%
Burn	15%
TeamG	15%
Community	15%
Dividend Pool (GENc)	35%
DevG	5%

• BNB raised auto-distributed daily to DevG, TeamG, LP, Marketing, Community, SecureAudit, Expansion, LevelUpVision.

BNB Daily Distribution	Share
TeamG	10%
Liquidity Pool (LP)	50%
Marketing	6%
Community	5%
SecureAudit	7%
DevG	10%
LevelUpVision	7%
Project Expansion	5%

All redistribution is executed transparently by contract logic, ensuring a trustless mechanism.

B100D Loyalty

• Duration: 100 days.

• Daily payout: 15,000 GENc per participant.

• Final bonus: proportional to initialHold.

• Eject: if balance < initialHold → bot calls ejectFromWhitelist() → SC sets isActive=false → no further payouts or final bonus.

• Whitelist fee: 0.1 BNB → routed to GENc Gas Reserve.

• Minimum holding requirement: 15,000,000 GENc.

Tax Model v1.0

Category	Buy	Sell	Transfer
Auto-Burn	1%	1%	1%
Liquidity Injection	1%	4%	0%
Development (DevG)	1%	2%	0%
Team (TeamG)	1%	0.5%	0%
Marketing (MktG)	1%	0.5%	0%
Rewards (BNB)	2%	2%	1%
TOTAL	7%	10%	2%

• Model locked for 200 days, then subject to community governance vote.

• Auto-burn disabled by default (manual trigger possible).

• Initial swap threshold = 0.5%, owner-adjustable.

Public Sale + Daily Bonus

• Phases 1–4, min buy scaling 200k → 700k GENc.

• Daily bonus: 100k–300k GENc per wallet.

• Daily cap: 100 → 25 wallets.

• Bonus rollover: unused tokens roll over to next day. After day 300 → indefinite rollover.

Dividend System

• Modules: DividendTracker (divT) + DividendVerifier (divV).

• Cycle: 21–28 days (randomized by divV).

• Entry condition: ≥5,000,000 GENc at start of cycle.

• Must maintain at least initialHold until cycle ends.

• Progressive combo: +2% base, +1% every 2 cycles (max ~10%).

• HoldProof: dropping below requirement → kicked from cycle (no payout). Must re-enter next cycle with full holding.

• Payouts from dedicated Dividend Pool.

+151% Rule: if at any time during an active cycle a holder's balance increases by ≥151% of the current initialHold, the system immediately updates initialHold to this new balance. All subsequent payouts — even within the ongoing cycle — are calculated from the updated threshold

GENc Dividend Payout per Cycle (Progressive Combo + InitialHold Updates)

Airdrop System

• Components: airT (tracker) + airdropConsole (CLI).

• airT maintains trackedHolders.json; entry requirement: ≥100,000 GENc.

• Distribution: via CLI (snapshots, whitelist lists, schedules).

• Pools: up to 1.5B GENc for Pre-Sale + milestone + DAO allocations.
